

AWS CLOUD

(LIBRARY MANAGEMENT SYSTEM)

AWS :

- AWS means amazon web service and it is cloud computing platform.
- It is used to store data and manage it using internet.
- We use aws because it is easily accessible from anywhere and it has no down time and it follow pay-on-when we used .

AWS Cloud

- Cloud means storing data and running applications on the internet instead of our own computer.

Amazon EC2:

- Amazon EC2 stands for elastic compute cloud .
- It is like online computer which provide us to run heavy app and project which could not be run in our low level configuration laptop.

Use in Library Management System :

- I can use it to run my library management project .
- I can handle multiple request using EC2 in my project.
- I can store multiple application files in EC2.

Amazon S3

- S3 stands for Simple Storage Service. It is used to store files online.
- I can store this files :
 - Book cover images
 - PDF Books
 - Student ID photos
 - Backup files

Use in Library Management System :

- Instead of storing PDF books on our computer, I can store them in S3.
- Students download them whenever they needed. I have need to worry about storage .

AWS Lambda

- AWS Lambda runs code automatically when something happens. No need to keep a server running all the time.
- It is used to manage pay-on-when we used so we have not to pay extra for no usage of server .

Use in Library Management System :

- I can use this in my project for most of student don't use site at night for book and anything so server is not used so I can use aws lamda in my project so I not need to pay extra for server usage.

AWS Security

- AWS provides many security features to keep data safe.
- It provides :
 - User Login
 - Password Protection
 - Data Encryption
 - Access Control
 - Backup

Use in Library Management System :

- Only librarian can add books.
- Students can only view or issue books.
- Database remains secure.

AWS IAM (Identity and Access Management)

→ IAM is an AWS service used to control who can access AWS resources and what actions they are allowed to perform.

Use in a Library Management System :

- Admin Full access to AWS and the Library Management System.
- Librarian Can manage books but cannot change AWS billing settings.
- Student Can only view or borrow books; cannot modify book records.
